[linkedin.com/onkardunakhe](https://www.linkedin.com/in/onkardunakhe)

SKILLS

- **Programming Languages/Frameworks:** Java 21, Spring-Boot , Spring-Security, Spring AI, JPA ,Kafka, Microservices
- **Database Systems:** DBMS, MySQL
- **Tools:** IntelliJ IDEA, SQL Workbench, Hibernate, Postman, Docker
- **Version Control:** Git, GitHub
- **AI & Emerging Tech:** Spring AI, RAG, LLM Tool Calling, AI-driven Recommendation Systems
- **Cloud & Infrastructure:** AWS EC2, S3, IAM

EDUCATION

- **Master of science (Computer Science)** Sept 2022 - Sept 2024
Pune Vidyarthi Gurha's College of Science, Pune Pune
 - CGPA: 7.78/10
- **Bachelor of Science (Computer Science)** June 2019 - Aug 2022
PDEA's Annasaheb Magar Mahavidyalaya, Hadapsar Pune
 - CGPA: 7.88/10

PROJECTS / EXPERIENCE

- **E-Commerce Backend with AI Assistant ([Link](#))**
Tools: Java, Spring Boot, Spring Security, Spring AI, JWT, JPA/Hibernate, MySQL, RESTful APIs
 - **Built a secure and scalable e-commerce backend to manage users, products, carts, orders, and payments using a RESTful architecture.**
 - **Designed and streamlined a MySQL database schema with JPA/Hibernate, supporting reliable persistence for 10,000+ users and orders with strong data consistency.**
 - **Implemented JWT-based authentication and role-based authorization using Spring Security across 20+ API endpoints, preventing unauthorized access and elevating the security audit score by 20%.**
 - **Engineered a cart-to-payment workflow, ensuring orders are created only after successful payment confirmation, improving transaction reliability and preventing invalid order creation.**
 - **Integrated an AI assistant leveraging LLM tool calling to interpret user intent and dynamically execute backend operations for product search, comparison, and recommendations in an e-commerce system.**
 - **Created an AI-driven product recommendation system based on category similarity and user inputs to deliver relevant and personalized suggestions, enhancing user experience in an e-commerce platform.**
- **CloudDrive : A Personal Cloud Storage Solution ([Link](#))**
Tools: MongoDB, Node.js, Express, HTML/CSS, JavaScript
 - **Developed a Google Drive-like web application for efficient file management and storage, handling 100,000+ files securely using Node.js, Express, and MongoDB.**
 - **Composed RESTful APIs for file upload, download, and deletion, optimizing API response time 40% with optimized Express.js endpoints.**
 - **Applied JSON Web Tokens (JWT) for secure authentication and authorization, ensuring 99.9% access control accuracy and preventing unauthorized access.**
 - **Collaborated Multer for file uploads, enabling support for multiple file types up to 20mb , improving upload efficiency by 30% .**
 - **Engineered an enhanced MongoDB schema tailored for user and file management, resulting in a 30% increase in data retrieval speed while maintaining robust security protocols and efficient storage practices.**

CERTIFICATIONS

- **Backend Development Course** March 2024
- **Certifying Body:** [Physics Wallah](#)
