Skills

- **Programming Languages/Frameworks:** Java 21 , Spring Boot, Spring Security, Spring AI, Spring Data JPA, Kafka, Microservices
- **Database Systems:** DBMS, MySQL
- **Tools:** IntelliJ IDEA, SQL Workbench, Hibernate, Postman, Docker
- **Version Control:** Git, GitHub
- **AI & Emerging Tech:** Spring AI, RAG, LLM Tool Calling, AI-driven Recommendation Systems
- **Cloud & Infrastructure:** AWS EC2, S3, IAM

Education

- **Master of Science (Computer Science)** Sept 2022 - Sept 2024
Pune Vidyarthi Griha's College of Science, Pune
◦ CGPA: 7.78/10 Pune
- **Bachelor of Science (Computer Science)** June 2019 - Aug 2022
PDEA's Annasaheb Magar Mahavidyalaya, Hadapsar
◦ CGPA: 7.88/10 Pune

Projects / Experience

- **E-Commerce Backend with AI Assistant** GitHub Link
Tools: Java, Spring Boot, Spring Security, Spring AI, JWT, JPA/Hibernate, MySQL, RESTful APIs
 - Built a secure and scalable e-commerce backend to manage users, products, carts, orders, and payments using a RESTful architecture.
 - Designed and streamlined a MySQL database schema with JPA/Hibernate, supporting reliable persistence for **10,000+ users and orders** with strong data consistency.
 - Implemented **JWT-based authentication and role-based authorization** using Spring Security across **20+ API endpoints**, preventing unauthorized access and elevating the security audit score by **20%**.
 - Engineered a cart-to-payment workflow, ensuring orders are created only after successful payment confirmation, improving transaction reliability and preventing invalid order creation.
 - Integrated an AI assistant leveraging **LLM tool calling** to interpret user intent and dynamically execute backend operations for product search, comparison, and recommendations.
 - Created an **AI-driven product recommendation system** based on category similarity and user inputs to deliver relevant and personalized suggestions.
- **Freelance Client Project | Poddarsales.in (Coffee Distributor)** poddarsales.in
Tools: HTML5, CSS3, JavaScript, Responsive Web Design, Netlify, GoDaddy, DNS
 - Designed, developed, and deployed a **production-ready responsive business website** from scratch based on real-world client requirements.
 - Delivered **responsive and cross-browser compatible UI** using semantic HTML5, CSS3, and JavaScript for desktop, tablet, and mobile devices.
 - Crafted structured navigation, product showcase sections, reusable UI components, interactive elements, and contact form functionality to improve usability and customer engagement.
 - Configured **Netlify deployment and GoDaddy domain/DNS settings**, successfully publishing the website to a custom production domain.
 - Managed the complete development lifecycle including **requirement gathering, UI development, testing, deployment, domain configuration, and post-deployment updates**.
- **CloudDrive: A Personal Cloud Storage Solution** GitHub Link
Tools: MongoDB, Node.js, Express, HTML/CSS, JavaScript
 - Developed a Google Drive-like web application for efficient file management and storage, handling **100,000+ files** securely using Node.js, Express, and MongoDB.
 - Composed RESTful APIs for file upload, download, and deletion, optimizing API response time by **40%** with optimized Express.js endpoints.
 - Applied **JSON Web Tokens (JWT)** for secure authentication and authorization, ensuring **99.9% access control accuracy** and preventing unauthorized access.
 - Engineered an enhanced MongoDB schema tailored for user and file management, resulting in a **30% increase** in data retrieval speed while maintaining robust security protocols.

Certifications

- **Backend Development Course** March 2024
- **Certifying Body:** [Physics Wallah](#)
